

USER INTERFACE AND USER EXPERIENCE DESIGN LAB

EXPERIMENT – 1

NAME : SUNEEL P V
REG.NO : 23MIS0254
SLOT : L39+L40

Identify and observe bad designs and submit a minimum of 3 to 5 photographs of bad designs in the surrounding, home, product, or neighborhood. Create a Word or PDF report containing:

Source of photographs (GPS-enabled, own photograph, taken by you)
Description of the design Place (LOCATION)
Reasons why the design is bad
Suggested Improvement

1. Biometric Attendance System – Poor Student Identification

(Application number displayed instead of register number)

Reasons the design is bad:

1. Uses the application number instead of the register number.
2. Students cannot easily recognize their application number.
3. Attendance verification becomes difficult.

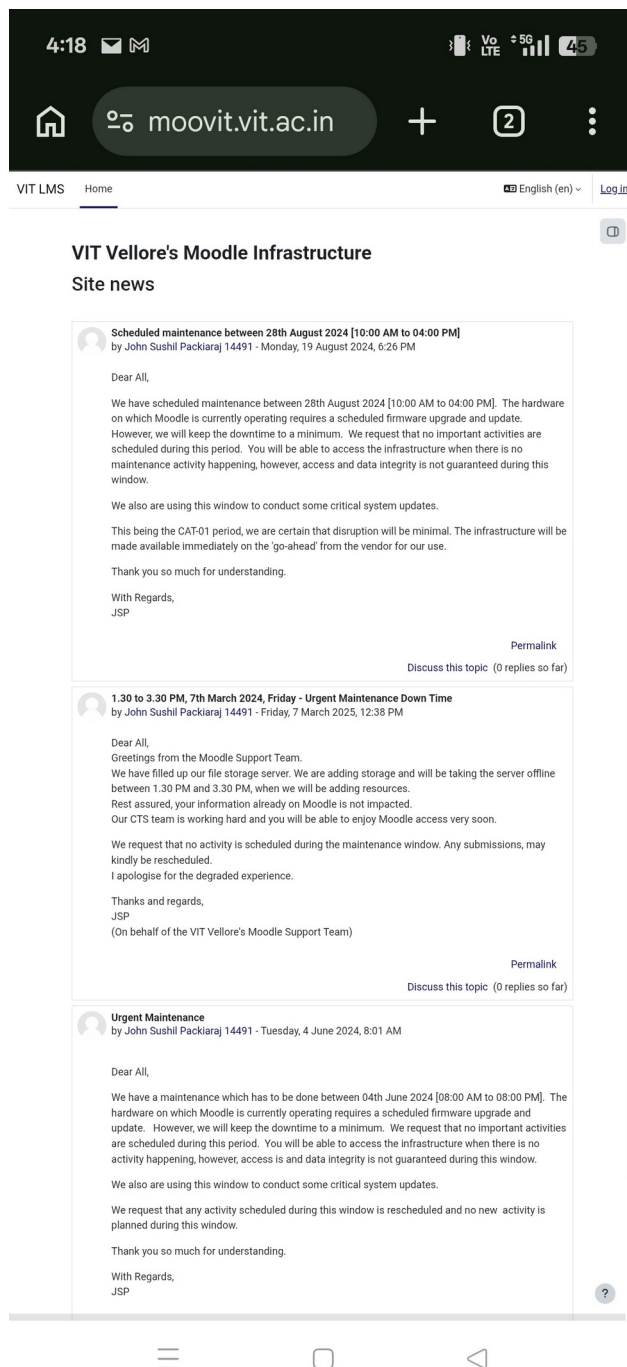

4. It increases confusion and possible errors.
5. The system provides a poor user experience.

Suggested improvements:

1. Display the register number instead of the application number.
2. Show both the register number and application number if needed.
3. Display the student's full name with the photo.
4. Use larger and clearer text for important details.
5. Keep the verification screen simple and easy to understand.

2. Moodle Homepage – Poor Content Prioritization

(Old announcements shown before important actions like Login)

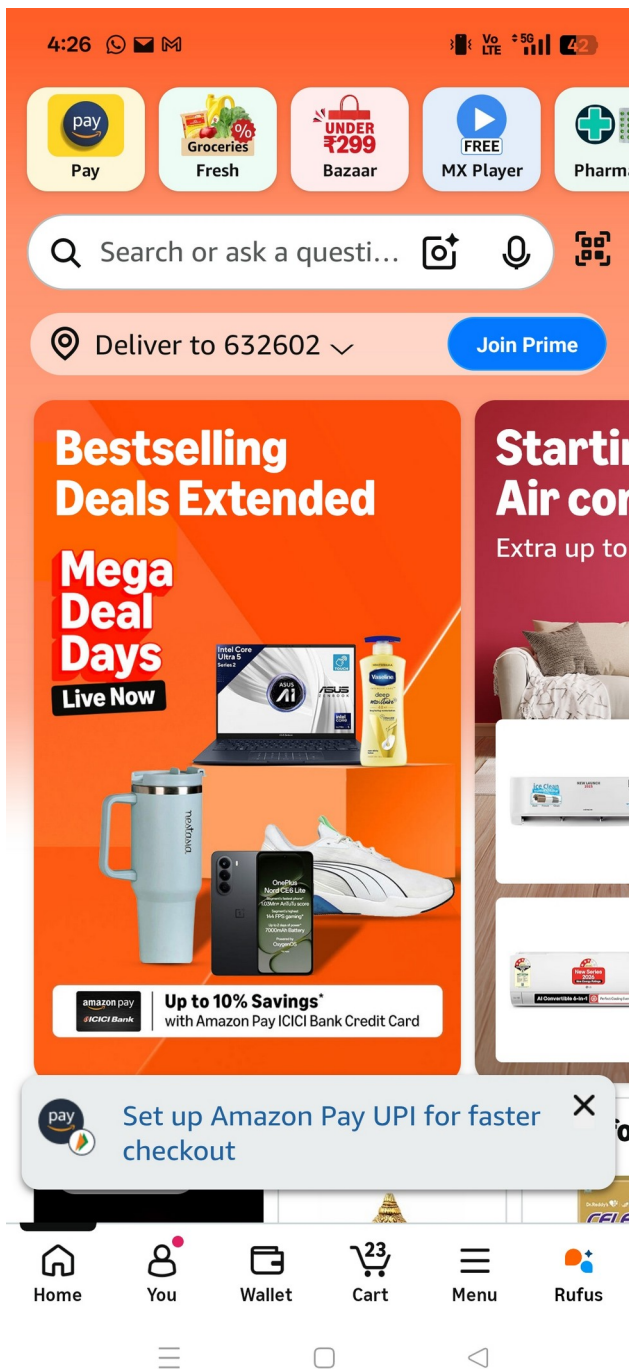

Reasons the design is bad:

1. Old site news is shown at the top of the homepage.
2. Most old announcements are no longer useful to students.
3. Important actions like login are less visible.
4. Users spend extra time finding the login button.
5. The homepage is cluttered and reduces usability.

Suggested improvements:

1. Place the login button at the center or top of the homepage.
2. Show only the latest or important announcements.
3. Move older news to a separate "Archive" section.
4. Give priority to frequently used features like Login and Courses.
5. Keep the homepage clean and easy to navigate.

3. Amazon Homepage – Missing Quick Access to Recent Orders
(Recent orders not displayed on the homepage)

Reasons the design is bad:

1. The homepage does not show recent orders.
2. Users must open multiple pages to check order status.
3. It takes extra time to track ongoing deliveries.
4. Important order information is less accessible.
5. The design reduces convenience for frequent users.

Suggested improvements:

1. Display recent orders on the homepage.
2. Show the latest order with its delivery status.
3. Add a quick "Track Order" button on the homepage.
4. Allow users to access recent purchases with one tap.
5. Give priority to frequently used features such as recent orders and tracking.

4. Course Allocation Page – Unorganized Slot Arrangement (Morning and afternoon slots mixed together)

Course Allocation Details

Course

Note:

- Student those who have curriculum can view the allocated courses.
- Allotted classes shown based on Specific Class Option (i.e. General/ Programme Group/ Programme Specialization/ School).
- If a particular course is not available in the course list, mean that the course is not offered by the respective school

Semester: Fall Semester 2026-27

Curriculum category: DC - Discipline Core

Course List: ISWE407L - User Interface and User Experience Design

Slot Detail	Venue	Faculty	Course Type
A2+TA2	SJT224	CHARANYA R	TH
A2+TA2	SJT221	RAJESWARI C	TH
A1+TA1	SJT221	JEEVITHA P	TH
A1+TA1	SJT223	KALAIVANI S	TH
A1+TA1	SJT222	RAJESWARI C	TH
A1+TA1	SJT215	SANTHOSH KUMAR S V N	TH
A1+TA1	SJT224	CHARANYA R	TH
A2+TA2	SJT223	JEEVITHA P	TH
A2+TA2	SJT222	KALAIVANI S	TH
A2+TA2	SJT215	SANTHOSH KUMAR S V N	TH

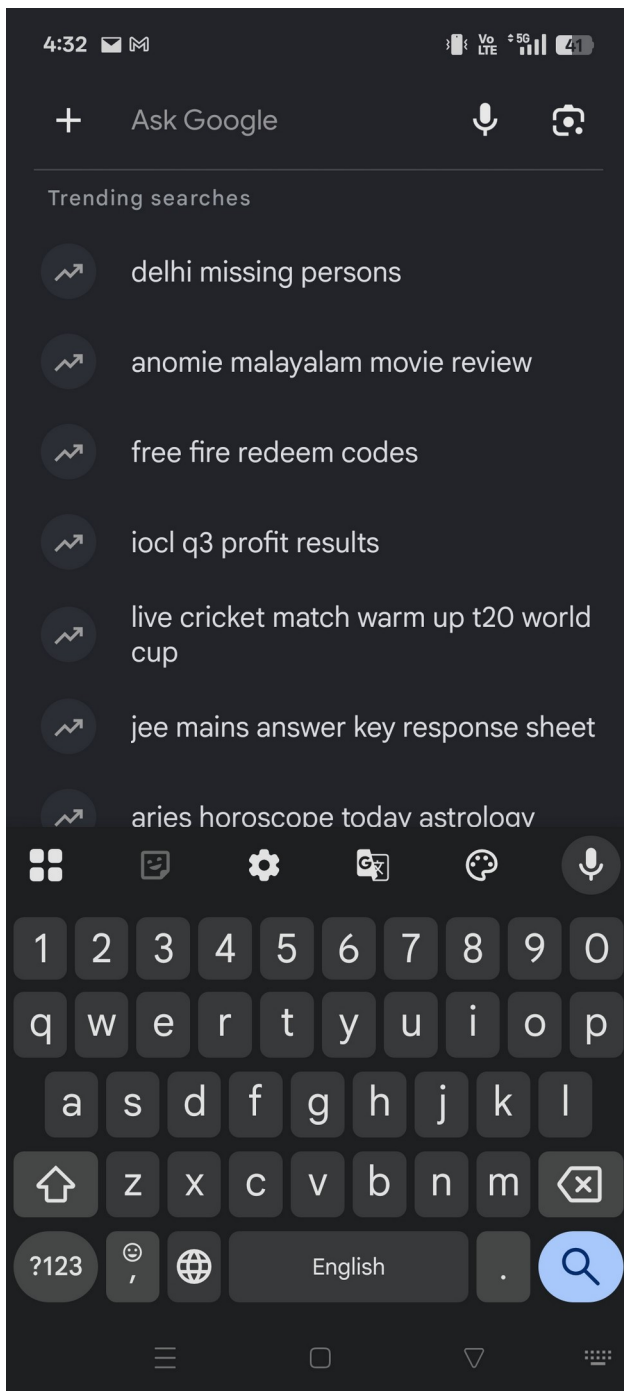

Reasons the design is bad:

1. Morning and afternoon slots are mixed together.
2. Students find it difficult to locate the required slot.
3. It takes more time to check course allocations.
4. The mixed layout increases confusion.
5. The information is not organized clearly.

Suggested improvements:

1. Group all morning slots together.
2. Group all afternoon slots together.
3. Display faculty details under each slot clearly.
4. Use headings or color coding to separate slot groups.
5. Organize the layout for faster and easier course selection.

5. Google Search Homepage in Mobiles –(AI Mode Not Easily Accessible)

Reasons the design is bad:

1. The homepage gives priority to Voice Search and Lens.
2. AI Mode is not visible on the main search screen.
3. Users need extra steps to access AI features.
4. Important AI functionality is less discoverable.
5. The layout does not prioritize modern search needs.

Suggested improvements:

1. Place the AI Mode button on the homepage.
2. Position AI Mode alongside the search bar.
3. Give equal or higher priority to AI Mode than Voice and Lens.
4. Allow one-tap access to AI-powered search.

5. Arrange the homepage based on the most frequently used features.
